

1. General information

- Handles with incorporated drive mechanism for the perimeter locking set.
- These handles are used to operate the horizontal and vertical pivoting windows with perimeter locking sets series 4608, 4606 and 4603.
- The standard handle is left hand. A left hand handle is turned to the left to open the window. On request we are able to manufacture right hand handles as well. When ordering please indicate quantity of left hand and right hand handles.
- Finish: aluminium anodised or polyester powder coated in more than 450 RAL colours. The handles with cam (N) can't be anodised.
- The handles are supplied with 3 mm thick forks, steel zinc plated:
 - series 502 and 5020: with 1 straight fork
 - series 503 and 5030: with 2 straight or cranked forks
